Arithmetic Adventures: Addition, Subtraction, Multiplication, and Division

This is the bedrock of all mathematics. Mastering these four operations is the first and most critical step in any math journey. Our **basic maths quiz questions with answers** will begin here.

Addition Questions

Addition is all about combining quantities. It's the simplest form of counting more.

Question 1: If you have 15 apples and you get 7 more, how many apples do you have in total?

Answer: $15 + 7 = 22$ apples.

Explanation: We combine the initial 15 apples with the additional 7 apples to find the total number.

Question 2: Calculate: $123 + 456 + 78$.

Answer: $123 + 456 + 78 = 657$.

Explanation: To solve this, we align the numbers vertically by place value (ones, tens, hundreds) and add each column, carrying over when necessary.

$$\begin{array}{r} 123 \\ 456 \\ + 78 \\ \hline 657 \end{array}$$

Subtraction Questions

Subtraction is the opposite of addition; it's about taking away or finding the difference between two numbers.

Question 3: Sarah had \$50. She spent \$18 on a new book. How much money does she have left?

Answer: $\$50 - \$18 = \$32$.

Explanation: We subtract the amount spent from the initial amount to find the remaining money.

Question 4: Find the difference between 905 and 342.

Answer: $905 - 342 = 563$.

Explanation: Similar to addition, we subtract column by column, borrowing from the left when a digit in the subtrahend is larger than the digit in the minuend.

$$\begin{array}{r} 905 \\ - 342 \\ \hline 563 \end{array}$$

Multiplication Questions

Multiplication is repeated addition. It's a quick way to add the same number multiple times.

Question 5: A baker makes 12 cakes each day. How many cakes does he make in 5 days?

Answer: $12 \text{ cakes/day} \times 5 \text{ days} = 60 \text{ cakes}$.

Explanation: We multiply the number of cakes made per day by the number of days to find the total.

Question 6: Calculate: 25×15 .

Answer: $25 \times 15 = 375$.

Explanation: We can solve this using the standard multiplication algorithm.

$$\begin{array}{r}
 25 \\
 \times 15 \\
 \hline
 125 \quad (25 \times 5) \\
 + 250 \quad (25 \times 10) \\
 \hline
 375
 \end{array}$$

Division Questions

Division is the process of splitting a number into equal parts. It's the inverse of multiplication.

Question 7: If you have 36 cookies and want to share them equally among 6 friends, how many cookies does each friend get?

Answer: 36 cookies / 6 friends = 6 cookies per friend.

Explanation: We divide the total number of cookies by the number of friends to find the equal share.

Question 8: Solve: $144 \div 12$.

Answer: $144 \div 12 = 12$.

Explanation: This means that 12 multiplied by itself equals 144.

Question 9 (Long Division): Divide 576 by 8.

Answer: $576 \div 8 = 72$.

Explanation: Using long division:

$$\begin{array}{r}
 72 \\
 \underline{8 \overline{) 576}} \\
 56 \\
 \underline{16} \\
 16 \\
 \underline{0}
 \end{array}$$

We see how many times 8 fits into 57 (which is 7 times), subtract, bring down the 6, and then see how many times 8 fits into 16 (which is 2 times).

Fractions, Decimals, and Percentages: The Interconnected Trio

These three concepts are often taught together because they are different ways of representing the same proportion or part of a whole. Understanding the relationships between them is key to mastering **basic maths quiz questions** involving these topics.

Fractions Questions

Fractions represent a part of a whole. They are written as one number over another (numerator/denominator).

Question 10: What is $\frac{1}{4}$ of 40?

Answer: 10.

Explanation: To find a fraction of a number, you multiply the number by the fraction, or divide the number by the denominator and multiply by the numerator. $(40 \div 4) \times 1 = 10$.

Question 11: Add the fractions: $\frac{1}{3} + \frac{1}{6}$.

Answer: $\frac{1}{2}$.

Explanation: To add fractions, they must have a common denominator. The least common denominator for 3 and 6 is 6. So, $1/3$ becomes $2/6$. Then, $2/6 + 1/6 = 3/6$, which simplifies to $1/2$.

Decimals Questions

Decimals use a decimal point to represent parts of a whole number. Each digit after the decimal point represents a power of 10 (tenths, hundredths, thousandths, etc.).

Question 12: Convert the fraction $3/4$ to a decimal.

Answer: 0.75.

Explanation: To convert a fraction to a decimal, divide the numerator by the denominator: $3 \div 4 = 0.75$.

Question 13: Add: $2.5 + 3.75$.

Answer: 6.25.

Explanation: Align the decimal points and add as usual.

$$\begin{array}{r} 2.50 \\ + 3.75 \\ \hline 6.25 \end{array}$$

Percentages Questions

Percentages mean "out of one hundred." The symbol is %.

Question 14: What is 50% of 200?

Answer: 100.

Explanation: 50% means $50/100$ or 0.5. So, $0.5 * 200 = 100$. Alternatively, 50% is half, and half of 200 is 100.

Question 15: If a shirt costs \$40 and is on sale for 25% off, how much is the discount?

Answer: \$10.

Explanation: Calculate 25% of \$40. $0.25 * \$40 = \10 . The sale price would be $\$40 - \$10 = \$30$.

A Glimpse into Algebra: The Language of Variables

Algebra introduces the concept of variables (letters representing unknown numbers) and equations. It's a powerful tool for solving problems where information is missing.

Algebraic Questions

Question 16: Solve for x: $x + 7 = 15$.

Answer: $x = 8$.

Explanation: To isolate x, subtract 7 from both sides of the equation: $x + 7 - 7 = 15 - 7$, which gives $x = 8$.

Question 17: Solve for y: $3y = 21$.

Answer: $y = 7$.

Explanation: To isolate y, divide both sides of the equation by 3: $3y / 3 = 21 / 3$, which gives $y = 7$.

Question 18: If $a = 5$ and $b = 3$, what is the value of $2a + b$?

Answer: 13.

Explanation: Substitute the values of a and b into the expression: $2(5) + 3 = 10 + 3 = 13$.

Geometry Basics: Shapes and Space

Geometry deals with shapes, sizes, positions of figures, and properties of space. Even basic geometry involves some fundamental calculations.

Geometry Questions

Question 19: What is the perimeter of a square with sides of length 5 cm?

Answer: 20 cm.

Explanation: The perimeter of a square is the total length of all its sides. Since all sides of a square are equal, $\text{Perimeter} = 4 \times \text{side length} = 4 \times 5 \text{ cm} = 20 \text{ cm}$.

Question 20: What is the area of a rectangle with a length of 10 meters and a width of 4 meters?

Answer: 40 square meters.

Explanation: The area of a rectangle is calculated by multiplying its length by its width. $\text{Area} = \text{length} \times \text{width} = 10 \text{ m} \times 4 \text{ m} = 40 \text{ m}^2$.

Questions & Answers About basic maths quiz questions with answers

No	Question	Answer
1	What's the quickest way to multiply two-digit numbers? Any handy tricks for mental math?	Yes! For multiplying two-digit numbers, you can use the 'lattice multiplication' or 'grid method', which breaks it down. Alternatively, a mental math trick involves breaking down one of the numbers (e.g., $23 \times 7 = (20 \times 7) + (3 \times 7)$) or using properties like distributive property.
2	I always mess up fractions! What's the simplest way to understand adding and subtracting them?	The key is finding a common denominator! You need both fractions to have the same bottom number before you can add or subtract the top numbers. If they don't have a common denominator, multiply the numerator and denominator of each fraction by the appropriate number to make them match.
3	What's the deal with percentages? How do I easily calculate, say, 20% of \$50?	To find a percentage of a number, convert the percentage to a decimal by dividing by 100 (20% becomes 0.20) and then multiply it by the number. So, $0.20 \times \$50 = \10 . Alternatively, 10% of \$50 is \$5, so 20% is double that, or \$10.
4	I forget the order of operations. PEMDAS/BODMAS – which one should I use and what does it mean?	Both PEMDAS (Parentheses, Exponents, Multiplication/Division, Addition/Subtraction) and BODMAS (Brackets, Orders, Division/Multiplication, Addition/Subtraction) mean the same thing! They ensure you solve calculations in the correct order to get the right answer. Always tackle parentheses/brackets first, then exponents/orders, then multiplication and division (from left to right), and finally addition and subtraction (from left to right).
5	What are prime numbers? And can you give me a quick tip on how to identify them?	Prime numbers are whole numbers greater than 1 that have only two divisors: 1 and themselves. For example, 7 is prime because only 1 and 7 divide it. A tip to check: try dividing by small prime numbers (2, 3, 5, 7, 11, etc.) up to the square root of the number you're testing. If none of them divide it evenly, it's prime.
6	I'm confused by negative numbers. How does adding a negative number affect the sum?	Adding a negative number is the same as subtracting its positive counterpart. For instance, $5 + (-3)$ is the same as $5 - 3$, which equals 2. Think of it as moving left on a number line.
7	What's the difference between 'mean', 'median', and 'mode'? Are they all the same thing?	No, they're different measures of central tendency! The mean is the average (sum of numbers divided by count). The median is the middle number when the data is ordered. The mode is the number that appears most frequently.
8	Geometry feels so abstract! What's the easiest way to remember the area of a rectangle?	The area of a rectangle is simply its length multiplied by its width (Area = Length x Width). Imagine tiling the rectangle – the area tells you how many square units fit inside.
