Identify keywords that your target audience uses to search for products or services like yours. Naturally incorporate these keywords into your website's titles, headings, and body content. Tools like Google Keyword Planner can help with this.

3. Mobile-Friendliness

Google Sites automatically creates responsive websites, meaning they adapt well to different screen sizes (desktops, tablets, smartphones). This is a critical SEO factor.

4. Image Optimization

Use descriptive file names and alt text for your images. Alt text helps search engines understand the content of your images and improves accessibility.
