Getting Started: Your First Steps with Your Keystone Cougar

The thrill of a new RV is undeniable, but before you hit the open road, a little preparation goes a long way. This section covers the essential initial steps to familiarize yourself with your new home on wheels.

Pre-Trip Inspection: Your Safety Net

Think of this as your pre-flight check for your RV. A thorough pre-trip inspection can prevent minor issues from becoming major headaches and, more importantly, ensure your safety. Here's a checklist:

- * **Tires:** Check tire pressure (crucial!), look for any signs of wear, damage, or bulges. Remember to check your spare tire too.
- * **Brakes:** Test your RV's brakes before you leave your driveway.
- * **Lights:** Ensure all exterior lights (headlights, taillights, brake lights, turn signals) are functioning correctly.
- * **Hitch Connection:** Double-check the connection between your tow vehicle and your Cougar. Ensure the safety chains are properly attached and not dragging.
- * **Propane Tanks:** Verify that your propane tanks are securely fastened and that the valves are closed when not in use.
- * **Water Systems:** For initial setup, check for any leaks in your fresh water system and ensure your water heater is ready to go.
- * **Slide-outs (if applicable):** Before you leave a campsite, ensure your slide-outs are fully retracted and latched.

Understanding Your Cougar's Systems: The Heart of Your RV

Your Keystone Cougar is a complex, yet remarkably user-friendly, machine. Familiarizing yourself with its core systems is paramount for confident operation.

The Electrical System: Powering Your Adventure

Your Cougar likely runs on a 12-volt DC system for internal appliances and lights, and a 110-volt AC system for shore

power and generator use. * **Shore Power:** This is your connection to campground electricity. Your RV will have an inlet (usually 30 or 50 amp) where you connect your power cord. Ensure your cord is in good condition and that you are using the correct adapter for the campground's power pedestal. * **12-Volt System:** This is powered by your RV's batteries, which are recharged by your tow vehicle, shore power, or a generator. This system powers your interior lights, water pump, refrigerator (on DC mode), slide-out motors, and more. * **Inverter/Converter:** Most RVs have a converter that transforms 110-volt AC power to 12-volt DC power when on shore power or generator. An inverter does the opposite, converting 12-volt DC to 110-volt AC when you're not connected to external power, allowing you to run certain AC appliances. * **Generator (if equipped):** Your generator provides independent power. Familiarize yourself with its startup procedure, fuel type, and maintenance requirements.

The Plumbing System: Your Mobile Water Source

The plumbing in your Cougar is designed for convenience, but it requires some understanding. * **Fresh Water Tank:** This is where you store your potable water. Always use potable water for drinking, cooking, and showering. Fill it at a potable water source. * **Water Pump:** When you're not connected to campground water, the water pump draws water from your fresh water tank to supply your faucets and shower. You'll need to turn it on to use your water. * **City Water Connection:** This is where you connect to campground water supply. When connected, the water pump typically

shuts off automatically. * **Gray Water Tank:** This tank collects wastewater from your sinks and shower. * **Black Water Tank:** This tank collects wastewater from your toilet. Proper handling of black water is essential for hygiene and responsible RVing. * **Winterization:** If you plan on storing your RV in freezing temperatures, proper winterization of your plumbing system is absolutely critical to prevent costly damage. Refer to your manual for detailed instructions.

The Propane System: Fueling Your Comfort

Propane is your primary source of fuel for your refrigerator (when not on electric), water heater, and furnace. * **Propane Tanks:** These are usually found on the tongue of your travel trailer or in a dedicated compartment on fifth wheels. Ensure they are securely mounted. * **Regulator:** This device reduces the high pressure from the propane tanks to a usable pressure for your appliances. * **Appliance Operation:** Learn how to light each propane appliance manually if needed, although most modern RVs have electronic ignition. * **Safety:** Always ensure good ventilation when using propane appliances and carry a propane leak detector. If you suspect a leak, turn off the propane supply immediately and ventilate the area.

Operating Your Keystone Cougar: Mastering the Essentials

Now that you're familiar with the systems, let's get into the practicalities of operating your Cougar.

Slide-outs: Expanding Your Living Space

Slide-outs are a fantastic feature, dramatically increasing your interior living space. * **Operation:** Most slide-outs are operated by electric motors. You'll typically find a switch or control panel to extend and retract them. * **Before Extending:** Ensure the RV is level and that there are no obstructions around the slide-out. * **Before Retracting:** Make sure all items inside the slide-out are secured and that there are no objects interfering with its closure. * **Troubleshooting:** If a slide-out is slow or won't operate, check your battery levels or consult your manual for troubleshooting tips.

Awning Deployment: Shade and Shelter

Your awning provides welcome shade and protection from the elements. * **Operation:** Most awnings are power-retractable. There's usually a switch inside your RV. * **Wind:** Be mindful of wind. High winds can damage your awning. It's generally best to retract it in windy conditions. * **Drainage:** Ensure water can drain from the awning when it's extended to prevent sagging.

Leveling Your RV: A Stable Foundation

A level RV is crucial for comfortable living and proper appliance function. * **Manual Jacks:** Many Cougar models have manual leveling jacks at each corner. Use them to stabilize and level the RV. * **Automatic Leveling Systems:** Higher-end models may feature automatic leveling systems that do the work for you. * **Leveling Blocks:** You may need

leveling blocks or ramps to achieve a perfect level, especially on sloped surfaces.

Maintenance: Keeping Your Cougar in Top Shape

Regular maintenance is key to extending the life of your Keystone Cougar and ensuring its reliability.

Routine Checks: The Little Things That Matter

*** **Tire Pressure and Condition:**** As mentioned before, this is vital. Check it every time you use your RV. *** **Battery Maintenance:**** Keep your batteries clean and charged. Check water levels if you have flooded lead-acid batteries. *****
****Appliance Checks:**** Periodically test all your appliances to ensure they are functioning correctly. *** **Seals and Caulking:**** Inspect all seals around windows, doors, and roof penetrations for any signs of cracking or damage. Re-caulking as needed can prevent leaks.

Winterization and De-winterization: Preparing for the Seasons

*** **Winterization:**** This is a critical process to prevent freeze damage to your plumbing. It typically involves draining all water systems, blowing out the lines with compressed air, and adding RV antifreeze. Follow your manual's instructions precisely. *** **De-winterization:**** In the spring, you'll need to reverse the winterization process, flush the system, and sanitize your fresh water tank.

Appliance Specific Maintenance:

* **Refrigerator:** Clean the coils regularly for efficient operation. * **Water Heater:** Flush out sediment periodically. Check for anode rod wear. * **Furnace:** Ensure the vent is clear of debris.

Troubleshooting Common Issues: When Things Go Awry

Even with the best preparation, RVs can encounter issues. Here are a few common problems and their potential solutions.

No Power: A Common Glitch

* **Check Breakers/Fuses:** Your RV has a main breaker panel. Ensure no breakers have tripped. * **Battery Levels:** Are your batteries charged? * **Shore Power Connection:** Is the campground power working? Is your cord properly connected? * **Converter/Inverter:** If you suspect an issue with these, consult your manual or a qualified technician.

Water Not Pumping: A Thirsty Problem

* **Is the Pump On?** It sounds simple, but it's easily overlooked! * **Water in Fresh Tank? * **Air in Lines:** You might need to bleed the air from the system by running faucets until water flows steadily. * **Pump Filter:** Check and clean the pump's inlet filter.

Propane Not Working: A Cold Reality

* **Propane Tanks Open?** * **Pilot Light (if manual):** Is it lit? * **Appliance Valves:** Are they turned to the "on" position? * **Gas Lines Blocked:** This is less common but can happen.
