Dr. Servan-Schreiber's Anticancer Diet: A Comprehensive Guide *Dr. David Servan-Schreiber, a renowned neuroscientist, tragically passed away from cancer himself, but his legacy includes a powerful approach to nutrition and cancer prevention and treatment. His philosophy, detailed in his book "Anticancer: A New Way of Life," isn't about a rigid diet but a holistic lifestyle encompassing nutrition, stress management, and physical activity. While not a cure, it offers a powerful framework for supporting the body's natural healing mechanisms and enhancing the efficacy of conventional medical treatments. The core of Dr. Servan-Schreiber's approach lies in minimizing exposure to known carcinogens while maximizing the intake of nutrients that support cellular health and immune function. This means emphasizing whole, unprocessed foods while drastically reducing or eliminating processed foods, refined sugar, and red meat.*

The Pillars of Dr. Servan-Schreiber's Anticancer Diet: **The diet isn't strictly prescriptive but rather focuses on principles. Key elements include:**

- Plant-Based Emphasis: A significant portion of the diet should consist of fruits, vegetables, legumes, and whole grains. These are rich in antioxidants, vitamins, minerals, and fiber – all crucial for cellular repair and immune function.
- Minimizing

Processed Foods: Processed foods, often loaded with added sugars, unhealthy fats, and artificial ingredients, are strongly discouraged. These contribute to inflammation and oxidative stress, both linked to cancer development.

• Reducing Red Meat Consumption: **Red and processed meats are associated with an increased risk of several cancers. The diet advocates for limiting consumption or eliminating them altogether.**

• Healthy Fats: **The diet encourages healthy fats, particularly omega-3 fatty acids found in fatty fish, flaxseeds, and walnuts, which possess anti-inflammatory properties.**

• Cruciferous Vegetables: **Broccoli, cauliflower, Brussels sprouts, and kale are rich in compounds that may help detoxify the body and support healthy cell growth.**

• Regular Hydration: **Adequate water intake is vital for cellular function and detoxification.**

Decoding the Dr. Servan-Schreiber Anticancer Diet: A Holistic Approach to Health

The battle against cancer is multifaceted, and while conventional treatments like chemotherapy and radiation remain cornerstones, many are seeking complementary strategies to bolster their health and well-being. Among these, the role of diet has garnered significant attention. One prominent figure in this space is Dr. David Servan-Schreiber, a neuroscientist and oncologist who, after his own cancer diagnosis, became a passionate advocate for a lifestyle-based approach to cancer prevention and management. His work, particularly his book "Anticancer: A New Way of Life," introduced a

powerful framework, often referred to as the "Dr. Servan-Schreiber anticancer diet," which emphasizes nourishing the body to fight disease.

It's important to understand that this isn't a rigid, prescriptive "diet" in the traditional sense of restricting specific food groups for rapid weight loss.

Instead, the Dr. Servan-Schreiber anticancer diet is a comprehensive lifestyle philosophy centered on making informed food choices and adopting healthy habits that create an environment less hospitable to cancer cells. It's about empowering individuals with knowledge and actionable steps to optimize their body's natural defenses. Let's delve into the core principles and practical applications of this influential approach.

The Philosophy Behind the Dr. Servan-Schreiber Anticancer Diet

Dr. Servan-Schreiber's journey was profoundly shaped by his personal experience with a brain tumor. This led him to explore not only the scientific mechanisms of cancer but also the profound impact of lifestyle, particularly diet, on disease progression. His core belief was that while we may not always control our genetic predispositions, we have significant agency over the environmental factors that influence our cells. The "anticancer diet" is therefore a testament to this belief, advocating for foods and practices that:

- 1. Reduce Inflammation: Chronic inflammation is a known driver of**

many diseases, including cancer. The diet focuses on foods that combat inflammation and minimize pro-inflammatory responses.

- 2. Support the Immune System: A robust immune system is crucial for identifying and destroying cancerous cells. The diet emphasizes nutrients that strengthen immune function.**
- 3. Provide Antioxidants: Oxidative stress, caused by free radicals, can damage DNA and contribute to cancer development. Antioxidant-rich foods neutralize these harmful molecules.**
- 4. Balance Hormones: Certain hormonal imbalances can fuel cancer growth. The diet aims to promote hormonal equilibrium.**
- 5. Promote Gut Health: The gut microbiome plays a vital role in**

overall health, including immune response and nutrient absorption. A healthy gut is an integral part of this anticancer strategy.

The Dr. Servan-Schreiber anticancer diet is not about deprivation; it's about abundance - an abundance of nutrient-dense, life-affirming foods. It encourages a shift in perspective, viewing food as medicine and a powerful tool for health optimization.

Key Food Groups and Recommendations

While the Dr. Servan-Schreiber anticancer diet is holistic, certain food groups and individual foods are highlighted for their potent anticancer properties. These recommendations are rooted in extensive scientific

research and reflect a focus on whole, unprocessed foods.

The Powerhouses: Fruits and Vegetables

This is arguably the cornerstone of the Dr. Servan-Schreiber anticancer diet. He strongly advocates for consuming a wide variety of colorful fruits and vegetables daily. The principle here is simple: the more diverse the colors, the broader the spectrum of beneficial phytochemicals and antioxidants you're consuming.

- 1. Cruciferous Vegetables: Broccoli, cauliflower, Brussels sprouts, kale, cabbage, and bok choy are superstars. They contain glucosinolates, which are converted into isothiocyanates and indoles - compounds shown to help detoxify**

carcinogens and inhibit tumor growth.

- 2. Alliums: Garlic, onions, leeks, and shallots are rich in organosulfur compounds that have demonstrated anticancer effects.**
- 3. Berries: Blueberries, raspberries, strawberries, and blackberries are packed with anthocyanins, ellagic acid, and other potent antioxidants that can protect cells from damage.**
- 4. Leafy Greens: Spinach, arugula, romaine lettuce, and Swiss chard are excellent sources of vitamins, minerals, and carotenoids.**
- 5. Tomatoes: Lycopene, a powerful antioxidant found in tomatoes, has been linked to a reduced risk of certain cancers, particularly prostate cancer.**
- 6. Other Colorful Produce: Don't forget**

about carrots, bell peppers, sweet potatoes, and dark leafy greens like spinach. Each color signifies a different array of beneficial compounds.

The recommendation is to aim for at least five servings of diverse fruits and vegetables every day, with a focus on variety. Think about incorporating them into every meal and snack.

Healthy Fats: Essential for Cell Health

Fats are not the enemy; in fact, certain healthy fats are vital for hormone production, nutrient absorption, and reducing inflammation. The Dr. Servan-Schreiber anticancer diet prioritizes monounsaturated and polyunsaturated fats, particularly omega-3 fatty acids.

- 1. Omega-3 Fatty Acids:** These are crucial for their anti-inflammatory properties and their role in cell membrane health. Excellent sources include:
 - 1. Fatty fish:** Salmon, mackerel, sardines, anchovies. Aim for at least two servings per week.
 - 2. Flaxseeds and chia seeds:** Great plant-based sources of ALA, a type of omega-3.
 - 3. Walnuts:** Another excellent plant-based omega-3 option.
- 2. Monounsaturated Fats:** Found in olive oil, avocados, and nuts, these fats are beneficial for heart health and can help reduce inflammation.
- 3. Limit Saturated and Trans Fats:** These are found in processed foods, fried foods, and fatty cuts of meat. They can contribute to inflammation

and should be consumed in moderation or avoided.

Lean Protein: Building Blocks for Repair

Protein is essential for building and repairing tissues, including immune cells. The Dr. Servan-Schreiber anticancer diet recommends lean sources of protein.

- 1. Fish: As mentioned, fatty fish are ideal due to their omega-3 content.**
- 2. Poultry: Lean cuts of chicken and turkey, preferably organic and free-range.**
- 3. Legumes: Beans, lentils, and peas are fantastic plant-based protein sources that are also rich in fiber and other nutrients.**
- 4. Nuts and Seeds: Provide protein, healthy fats, and fiber.**

Red meat should be consumed in moderation, and processed meats should be avoided due to their association with increased cancer risk.

Whole Grains: Fiber and Sustained Energy

While refined grains strip away valuable nutrients and fiber, whole grains provide sustained energy and essential fiber, which is crucial for gut health and blood sugar regulation.

- 1. Oats, quinoa, brown rice, barley, and whole wheat.**

Look for products where "whole grain" is listed as the first ingredient. Limit refined carbohydrates like white bread, white rice, and sugary cereals.

Foods to Minimize or Avoid

Just as important as what to include is understanding what to limit or eliminate. Dr. Servan-Schreiber's approach encourages reducing exposure to substances that can promote inflammation, damage cells, or feed cancer growth.

- 1. Processed Foods: These are often laden with unhealthy fats, refined sugars, excessive sodium, and artificial additives, all of which can contribute to inflammation and disease.**
- 2. Sugary Drinks and Added Sugars: Excess sugar can fuel inflammation and contribute to weight gain, a risk factor for many cancers.**
- 3. Fried Foods: Often cooked in unhealthy oils and can form harmful**

compounds during high-heat cooking.

- 4. Red and Processed Meats: As mentioned, these have been linked to an increased risk of certain cancers.**
- 5. Excessive Alcohol: Alcohol is a known carcinogen and should be consumed in moderation, if at all.**
- 6. Artificial Sweeteners and Additives: While research is ongoing, many are best avoided due to potential long-term health concerns.**

Beyond Diet: Lifestyle Factors

The "Dr. Servan-Schreiber anticancer diet" is intrinsically linked with other lifestyle choices that support overall well-being and a robust anticancer environment. It's a holistic philosophy, not just a meal plan.

Stress Management

Chronic stress can suppress the immune system and promote inflammation. Dr. Servan-Schreiber emphasized the importance of finding effective ways to manage stress, such as:

- 1. Meditation and mindfulness**
- 2. Yoga and deep breathing exercises**
- 3. Spending time in nature**
- 4. Engaging in hobbies and activities you enjoy**

Regular Exercise

Physical activity is a powerful tool for cancer prevention and management. It helps to:

- 1. Reduce inflammation**
- 2. Boost the immune system**
- 3. Maintain a healthy weight**

4. Improve mood and reduce stress

Aim for a combination of aerobic exercise and strength training.

Adequate Sleep

Sleep is essential for cellular repair and immune function. Chronic sleep deprivation can negatively impact your body's ability to fight disease.

Environmental Toxins

While not always directly tied to diet, awareness of and minimizing exposure to environmental toxins is also a part of a comprehensive anticancer lifestyle. This includes things like pesticides, air pollution, and certain chemicals in household products.

replace conventional medical treatment for cancer. Always consult with your doctor or a qualified healthcare professional before making any significant changes to your diet or lifestyle, especially if you have a medical condition.

The power of this approach lies in its emphasis on empowerment. By understanding the profound connection between what we eat, how we live, and our health, we can make informed choices that support our bodies' innate ability to heal and protect themselves. The Dr. Servan-Schreiber anticancer diet offers a roadmap to a healthier, more vibrant life, grounded in the simple yet profound truth that food can be our greatest ally in the pursuit of well-being.

The Anticancer Diet by Dr. Servan-Schreiber: A Holistic Approach to Cancer Prevention and Management

Dr. Servan-Schreiber's work on the anticancer diet represents a pivotal intersection of nutritional science, oncology, and preventive medicine. Drawing on decades of clinical experience and extensive research into how diet influences cancer development and progression, his approach emphasizes the power of food not just as sustenance, but as a potent tool in the body's defense against malignancy. Rather than positioning diet as a standalone cure, Servan-Schreiber advocates for an integrated strategy where nutrient-dense eating patterns work synergistically with conventional treatments to support healing, reduce recurrence risk, and enhance overall quality of life.

Understanding the Foundations of the Anticancer Diet

At the core of Dr. Servan-Schreiber's anticancer diet is the principle that certain foods can either promote or inhibit cancer growth. His framework identifies key dietary components that influence inflammation, oxidative stress, hormonal balance, and immune function—factors deeply implicated in cancer biology. Central to this approach is the emphasis on whole, minimally processed plant-based foods such as leafy greens, cruciferous vegetables, colorful fruits, legumes, and healthy fats. These foods are rich in phytonutrients, antioxidants, and fiber, which collectively help neutralize carcinogens, modulate detoxification

pathways, and foster a healthy gut microbiome—an emerging cornerstone in cancer prevention. Servan-Schreiber also cautions against excessive consumption of processed meats, refined sugars, and refined carbohydrates, all of which research links to increased inflammation and insulin resistance—conditions that create a favorable environment for cancer cell proliferation. By promoting a predominantly plant-forward, low-inflammatory diet, the anticancer diet seeks to rebalance the body’s internal ecosystem, making it less hospitable to malignant transformation.

Practical Applications and Real-World Benefits

The anticancer diet is not a rigid regimen but a flexible, personalized framework adaptable to individual needs, cultural preferences, and medical conditions. For patients undergoing cancer treatment, integrating Servan-Schreiber’s principles can provide meaningful support. Nutrient-dense meals help maintain strength and energy during chemotherapy or radiation, mitigate treatment-related side effects such as fatigue and nausea, and improve tolerance to aggressive therapies. Moreover, by strengthening immune function and reducing systemic inflammation, this dietary approach may contribute to better treatment outcomes and improved survival rates. Beyond treatment, the anticancer diet plays a vital role in prevention. Long-term adherence to a diet rich in vegetables, fruits, and whole grains has been associated with lower incidence of several cancers, including colorectal, breast, and prostate cancers. Servan-Schreiber’s insights encourage proactive lifestyle choices—such as avoiding processed foods, moderating alcohol intake, and prioritizing plant-based meals—that empower individuals to take meaningful control over their cancer risk.

The Future of Nutrition in Oncology

As scientific understanding of cancer evolves, the role of nutrition is gaining increasing recognition within mainstream oncology. Dr. Servan-Schreiber's anticancer diet serves as a bridge between traditional dietary wisdom and cutting-edge research, highlighting how everyday food choices can profoundly influence disease trajectories. Emerging studies continue to validate the anti-inflammatory, antioxidant, and epigenetic effects of key dietary components, reinforcing the relevance of his model. Looking ahead, the integration of personalized nutrition into cancer care is poised to expand. Advances in genomics and microbiome research will enable more tailored dietary interventions, allowing oncologists and nutritionists to collaborate on individualized anticancer plans. The anticancer diet, rooted in whole foods and preventive health, is well-positioned to become a standard component of comprehensive cancer management—offering patients not just hope, but actionable, science-backed strategies to support healing and resilience.

In embracing Dr. Servan-Schreiber's vision, individuals are invited to see food as both a shield and a healing ally. By nourishing the body with intentional, nutrient-rich choices, the anticancer diet offers a powerful, accessible path toward improved health and long-term wellness in the face of cancer.

The Dr. Servan-Schreiber Anticancer Diet: A Comprehensive

Analysis

The journey through cancer treatment is often a multifaceted one, encompassing surgery, chemotherapy, radiation, and increasingly, lifestyle interventions. Among the latter, the "anticancer diet" championed by the late Dr. David Servan-Schreiber has garnered significant attention. This approach, deeply rooted in scientific research and personal experience, offers a hopeful perspective on how food can play a pivotal role in preventing, managing, and potentially even reversing certain cancers. This article delves deep into the principles of the Dr. Servan-Schreiber anticancer diet, exploring its core tenets, the scientific evidence supporting its recommendations, and practical advice for implementation.

Who Was Dr. David Servan-Schreiber?

Before dissecting his dietary recommendations, it's crucial to understand the man behind them. Dr. David Servan-Schreiber was a physician, neuroscientist, and author. His personal battle with a brain tumor, diagnosed in his thirties, profoundly shaped his understanding of cancer and his approach to healing. This lived experience, combined with his extensive medical and scientific background, led him to synthesize decades of research into accessible and actionable advice for the general public. His book, "Anticancer: A New Way of Life," became a bestseller, bringing his groundbreaking ideas on nutrition and lifestyle to a global audience. His holistic perspective emphasized the interconnectedness of mind, body, and environment in the fight against cancer.

The Core Principles of the Dr. Servan-Schreiber Anticancer Diet

At its heart, the Dr. Servan-Schreiber anticancer diet is not a restrictive, fad diet but rather a framework for adopting a healthier eating pattern that prioritizes foods with proven anti-inflammatory and antioxidant properties. The fundamental principle is to create an internal environment that is less conducive to cancer cell growth and more supportive of the body's natural defense mechanisms. The diet focuses on several key areas:

1. The Power of Plants: Fruits and Vegetables

Dr. Servan-Schreiber places immense emphasis on the consumption of a wide variety of fruits and vegetables. These vibrant foods are packed with phytonutrients, powerful compounds that act as antioxidants, anti-inflammatories, and even direct cancer-fighting agents. He advocated for a rainbow of colors on your plate, as different colors often signify different types of beneficial nutrients. For instance:

1. **Red and Orange:** Lycopene (tomatoes, watermelon), beta-carotene (carrots, sweet potatoes) - known for their antioxidant benefits.
2. **Green:** Sulforaphane and indoles (broccoli, cauliflower, kale) - potent detoxifiers.
3. **Blue and Purple:** Anthocyanins (berries, eggplant, red cabbage) - potent antioxidants that protect cells from damage.
4. **White and Brown:** Allicin (garlic, onions), selenium (mushrooms) - support immune function and detoxification.

The emphasis is on whole, unprocessed foods. Organic produce is

often preferred to minimize exposure to pesticides, which Dr. Servan-Schreiber viewed as potential disruptors of cellular health.

2. Healthy Fats: The Importance of Omega-3s

While many conventional diets demonize fat, Dr. Servan-Schreiber highlights the critical distinction between healthy and unhealthy fats. He strongly advocates for the inclusion of omega-3 fatty acids and discourages the consumption of omega-6 fatty acids.

Omega-3s, found in fatty fish (salmon, mackerel, sardines), flaxseeds, chia seeds, and walnuts, possess potent anti-inflammatory properties. Chronic inflammation is a known driver of cancer development and progression. Conversely, omega-6 fatty acids, prevalent in many processed foods and vegetable oils like soybean and corn oil, can promote inflammation when consumed in excess relative to omega-3s.

This dietary shift encourages the use of olive oil as a primary cooking fat and limits the intake of processed foods, which are often laden with unhealthy omega-6s and trans fats.

3. Reducing Sugar and Refined Carbohydrates

Sugar, particularly refined sugar, is a central villain in the Dr. Servan-Schreiber anticancer diet. Cancer cells are known to thrive on glucose, and high sugar intake can lead to elevated insulin levels, which can promote cell proliferation. Refined carbohydrates, such as white bread, white pasta, and sugary cereals, are rapidly converted to glucose in the body, contributing to this problem. The diet encourages replacing these with whole grains, complex

carbohydrates, and natural sweeteners in moderation.

The avoidance of processed foods, which are often loaded with added sugars, is a key component of this principle.

4. The Role of Cruciferous Vegetables

Cruciferous vegetables – including broccoli, cauliflower, Brussels sprouts, kale, and cabbage – are given a special place in Dr. Servan-Schreiber's recommendations. These vegetables are rich in glucosinolates, compounds that are converted into isothiocyanates within the body. These isothiocyanates have demonstrated remarkable anticancer effects, including inhibiting tumor growth, promoting cancer cell death (apoptosis), and aiding in detoxification.

He encouraged daily consumption of these vegetables, whether raw, steamed, or lightly cooked, to preserve their beneficial compounds. Understanding the science behind cruciferous vegetables adds a significant layer to the rationale of this diet.

5. Limiting Red Meat and Processed Meats

Dr. Servan-Schreiber advised limiting the consumption of red meat and, in particular, processed meats like bacon, sausages, and deli meats. These foods are often high in saturated fat and have been linked to an increased risk of certain cancers, especially colorectal cancer. The carcinogens formed during high-temperature cooking of meat (heterocyclic amines and polycyclic aromatic hydrocarbons) are also a concern.

Instead, the diet favors lean protein sources like fish, poultry, legumes, and plant-based proteins.

6. The Importance of Spices and Herbs

Beyond fruits and vegetables, Dr. Servan-Schreiber recognized the potent medicinal properties of various spices and herbs. Turmeric, with its active compound curcumin, is celebrated for its powerful anti-inflammatory and antioxidant effects. Ginger, garlic, cinnamon, oregano, and rosemary are also highlighted for their ability to combat inflammation and support overall health.

Incorporating these flavorful additions not only enhances the taste of meals but also significantly boosts their anticancer potential. The synergistic effects of these plant compounds are a crucial aspect of integrative oncology.

7. Probiotics and Fermented Foods

A healthy gut microbiome is increasingly recognized as essential for overall health, including immune function and cancer prevention. Dr. Servan-Schreiber's approach includes the consumption of fermented foods like yogurt, kefir, sauerkraut, and kimchi, which are rich in probiotics. These beneficial bacteria can help maintain a balanced gut environment, reduce inflammation, and support the immune system.

Scientific Evidence Supporting the Diet's Principles

The Dr. Servan-Schreiber anticancer diet is not based on anecdotal evidence alone. Its recommendations are underpinned by a growing body of scientific research:

1. **Epidemiological Studies:** Numerous studies have consistently shown that populations with higher intakes of fruits, vegetables,

and whole grains tend to have lower rates of cancer.

2. **Laboratory Research:** In vitro and animal studies have demonstrated that specific compounds found in plant-based foods, such as sulforaphane, resveratrol, and curcumin, can inhibit cancer cell growth and induce apoptosis.
3. **Inflammation and Cancer Link:** Research on chronic inflammation has solidified its role as a critical factor in cancer development. The dietary emphasis on anti-inflammatory foods directly addresses this.
4. **Gut Health and Immunity:** Emerging research on the gut-brain axis and the impact of the microbiome on immune responses further validates the inclusion of probiotics.

It is important to note that while the diet offers powerful preventive and supportive strategies, it is not a standalone cure for cancer. It is best viewed as a complementary approach to conventional medical treatments.

Implementing the Dr. Servan-Schreiber Anticancer Diet in Daily Life

Adopting the Dr. Servan-Schreiber anticancer diet is a journey of gradual changes rather than an overnight overhaul. Here are practical tips:

1. **Start with Small Changes:** Begin by incorporating one or two new healthy habits at a time. For example, add a serving of vegetables to every meal or switch to whole-grain bread.
2. **Prioritize Whole Foods:** Focus on fresh, unprocessed ingredients. Read food labels and avoid products with long ingredient lists, added sugars, and artificial additives.
3. **Cook at Home:** Preparing your own meals gives you complete control over the ingredients and cooking methods. Experiment

with new recipes and flavors.

4. **Embrace Healthy Fats:** Use olive oil for cooking and dressings. Include fatty fish in your diet at least twice a week. Snack on nuts and seeds.
5. **Hydrate Wisely:** Drink plenty of water. Limit sugary drinks, including fruit juices, which can be high in sugar.
6. **Listen to Your Body:** Pay attention to how different foods make you feel. Individual responses can vary.
7. **Seek Support:** If you have a cancer diagnosis, discuss any dietary changes with your oncologist or a registered dietitian specializing in oncology nutrition. They can help tailor recommendations to your specific needs and treatment plan.

Beyond Diet: The Holistic Approach

It's essential to remember that Dr. Servan-Schreiber's approach was holistic. While the diet is a cornerstone, he also emphasized the importance of:

1. **Stress Management:** Chronic stress can suppress the immune system and promote inflammation. Techniques like meditation, yoga, and mindfulness are crucial.
2. **Exercise:** Regular physical activity has been shown to reduce cancer risk and improve outcomes for those undergoing treatment.
3. **Adequate Sleep:** Quality sleep is vital for cellular repair and immune function.
4. **Environmental Toxins:** Minimizing exposure to environmental pollutants is also a key consideration.

Conclusion

The Dr. Servan-Schreiber anticancer diet offers a powerful,

evidence-based framework for embracing a lifestyle that supports cancer prevention and recovery. By focusing on nutrient-dense, anti-inflammatory foods, particularly an abundance of fruits, vegetables, and healthy fats, individuals can empower their bodies to fight disease more effectively. While not a substitute for medical treatment, this dietary philosophy, coupled with other healthy lifestyle choices, provides a proactive and empowering path toward a healthier future, embodying the spirit of integrative oncology and the profound impact of nutrition on well-being.

This involves shifting towards nutrient-dense, anti-inflammatory foods while reducing foods that may promote inflammation and cancer development.
2	What are the 'do' foods recommended in Dr. Servan-Schreiber's anticancer diet?	Key 'do' foods include plenty of colorful fruits and vegetables (especially cruciferous and dark leafy greens), whole grains, legumes, nuts, seeds, healthy fats like olive oil and avocados, and fatty fish rich in omega-3s. Herbs and spices like turmeric and ginger are also emphasized.
3	What are the 'don't' foods Dr. Servan-Schreiber advises limiting or avoiding?	The 'don't' list typically includes refined sugars, processed foods, red and processed meats, dairy (especially if sensitive), refined grains, fried foods, and excessive alcohol. These are often associated with inflammation and can contribute to cancer progression.
4	How does the anticancer diet aim to impact inflammation?	The diet focuses on consuming foods rich in antioxidants and anti-inflammatory compounds, such as those found in fruits, vegetables, and fatty fish, while actively avoiding pro-inflammatory foods like sugar and processed meats.
